

RxMind Pharmacy

Operational Policies & Procedures — 2026 Edition

Prior Authorization Policy

Q: What is the prior authorization process at RxMind?

A: RxMind's dedicated PA team manages the entire prior authorization process on behalf of patients and prescribers. Upon receiving a new prescription requiring PA, we collect clinical documentation from the prescribing provider, submit the request to the insurance carrier, and follow up until a decision is reached. Standard PA decisions are received within 3 to 5 business days. Urgent PA requests can be expedited within 24 to 72 hours when clinical urgency is documented.

Q: What happens if my prior authorization is denied?

A: RxMind's PA team will automatically evaluate all denial options. We will notify the prescriber and patient within 24 hours of a denial. Options include filing a formal appeal, requesting a peer-to-peer review between the prescriber and the insurance medical director, or identifying alternative medications on the formulary that may not require PA. RxMind's appeal success rate is approximately 67% for initial denials.

Q: How long does a prior authorization approval last?

A: Most PA approvals are valid for 12 months from the date of approval, though this varies by insurance carrier and medication. RxMind's system automatically tracks PA expiration dates and initiates renewal requests 60 days before expiration to prevent treatment gaps.

Delivery & Shipping Policy

Q: What are RxMind's shipping options?

A: RxMind offers standard delivery (2 to 3 business days) at no charge for all specialty medications. Overnight delivery is available for urgent needs at an additional fee of \$25. Saturday delivery is available in most markets. All shipments include real-time tracking and automated patient notifications via text or email at each stage of transit.

Q: How are temperature-sensitive medications shipped?

A: Medications requiring refrigeration (2 to 8 degrees Celsius) are shipped in validated insulated packaging with gel ice packs that maintain temperature for up to 48 hours. Medications requiring frozen storage are shipped with dry ice. RxMind uses only validated cold-chain packaging that meets USP 1079 guidelines. Patients are advised to refrigerate medications immediately upon receipt.

Q: What if my medication is damaged or lost during shipping?

A: RxMind provides full replacement at no charge for medications that are damaged, lost, or compromised during transit. Patients must report damage or non-delivery within 48 hours of the scheduled delivery date. RxMind will initiate a carrier investigation and ship a replacement within 24

hours of the confirmed report. A signed attestation from the patient is required for controlled substance replacements.

Q: Can I change my delivery address?

A: Patients may update their delivery address up to 4 hours before the scheduled ship time by calling RxMind's main line or updating their address in the patient portal. Address changes for controlled substances require identity verification. RxMind cannot redirect packages already in transit with most carriers.

Financial Assistance Policy

Q: Does RxMind offer financial assistance?

A: RxMind has a dedicated financial assistance team that screens every new patient for available assistance programs. Options include manufacturer copay assistance cards (which can reduce specialty medication costs to \$0 to \$10 per fill for commercially insured patients), manufacturer free drug programs for uninsured or underinsured patients, foundation grants for specific disease states, and state pharmaceutical assistance programs. RxMind enrolls eligible patients proactively — patients do not need to ask.

Q: What is the income threshold for free drug programs?

A: Eligibility varies by manufacturer program. Most manufacturer patient assistance programs require household income at or below 400 to 600 percent of the federal poverty level. Some programs have no income threshold for uninsured patients. RxMind's financial counselors assess eligibility for all applicable programs simultaneously and enroll patients in the best available option.

Q: How long does it take to get financial assistance approved?

A: Manufacturer copay cards are typically activated within 24 to 48 hours. Free drug program enrollments take 5 to 10 business days for initial approval. Foundation grant applications vary by organization but typically require 2 to 4 weeks. RxMind will provide bridge supply options when clinically appropriate while assistance applications are pending.

Refill & Dispensing Policy

Q: When should I request a refill?

A: RxMind recommends requesting refills at least 7 to 10 days before your current supply runs out. This allows time for insurance processing, PA renewals if needed, and shipping. RxMind's automated refill reminder system contacts patients by phone, text, or email 14 days before the anticipated run-out date based on days supply dispensed.

Q: Does RxMind offer automatic refills?

A: Yes. Patients may enroll in RxMind's AutoRefill program, which automatically initiates the refill process 14 days before the anticipated run-out date. AutoRefill is available for maintenance specialty medications. Patients receive a confirmation notification and have a 48-hour window to delay or cancel the refill before it ships. Controlled substances are excluded from AutoRefill per federal regulations.

Q: What is RxMind's return and refund policy?

A: Due to the nature of specialty medications and patient safety regulations, RxMind cannot accept returns of dispensed medications. Refunds are issued only in cases of RxMind dispensing error, manufacturer recalls, or documented damage during shipping. Patients who experience adverse reactions and discontinue therapy should contact RxMind to discuss options — in some cases, manufacturer programs may accept returned unused product.

Compounding Policy

Q: What compounding services does RxMind offer?

A: RxMind operates a USP 795 (non-sterile) and USP 797 (sterile) compliant compounding facility. We compound oral solutions and suspensions, topical creams and gels, sterile injectables, ophthalmic preparations, and suppositories. All compounded preparations are prepared by licensed pharmacists and undergo in-process and final quality testing before dispensing.

Q: When is a compounded medication appropriate?

A: Compounding is appropriate when a commercially available product does not meet a patient's clinical needs — for example, when a patient requires a different strength, dosage form, or formulation free of a specific allergen or excipient. RxMind's pharmacists assess each compounding request for clinical appropriateness and regulatory compliance before preparation.

Q: How long does it take to prepare a compounded medication?

A: Standard non-sterile compounds are prepared within 2 to 3 business days. Sterile compounds require 3 to 5 business days due to extended sterility testing requirements. Rush preparation (24 hours) is available for non-sterile compounds when clinical urgency is documented by the prescriber. All sterile compounds have a beyond-use date assigned per USP 797 guidelines.

Clinical Services Policy

Q: What clinical monitoring does RxMind provide?

A: Every patient on a specialty medication is enrolled in RxMind's clinical monitoring program. A dedicated pharmacist conducts an initial comprehensive medication review at enrollment and scheduled follow-up calls at day 7, day 30, and monthly thereafter. Monitoring assessments include adherence, tolerability, adverse effects, and lab value review when applicable. Findings are communicated to the prescribing provider via secure fax or electronic health record integration.

Q: Does RxMind provide injection training?

A: Yes. For all self-administered injectable medications, RxMind provides comprehensive injection training before the first dispense. Training options include in-home nurse visits (available in select markets), telephonic training with a clinical pharmacist, and written and video instructional materials available through the patient portal. RxMind will not dispense a self-injectable medication until training completion is documented.

Q: How do I reach a pharmacist after hours?

A: A clinical pharmacist is available on-call 24 hours a day, 7 days a week for urgent patient needs. Patients can reach the after-hours pharmacist by calling RxMind's main line at 1-800-RXMIND-1 and selecting the after-hours option. Non-urgent questions can be submitted through the patient portal and will be addressed within 4 business hours the next business day.
